1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1 - 4, drawn to a shut down unit, classified in class 361, subclass

170+.

II. Claims 5 - 19, drawn to an electro-pneumatic controller, classified in class

137, subclass 487.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in

this relationship are distinct if it can be shown that (1) the combination as claimed does

not require the particulars of the subcombination as claimed for patentability, and (2)

that the subcombination has utility by itself or in other combinations (MPEP §

806.05(c)). In the instant case, the combination as claimed does not require the

particulars of the subcombination as claimed because the combination does not require

the details of the switch recited in the claims 1 – 4 directed to the sub combination. The

subcombination has separate utility such as for any application calling for a two-position

electronic switch.

3. Because these inventions are distinct for the reasons given above and have

acquired a separate status in the art as shown by their different classification, restriction

for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramesh Krishnamurthy whose telephone number is
